

TELESCOPIC LADDER AZ-30 NOVUS

The superstructure given rose from the demand from fire-extinguishing committees substitute the out-of-date fire-extinguishing car IFA W50L/LD by undercarriage Mercedes-Benz Atego. Ladder set has passed through complete renovation which ensures its entire functionality and reliability.

Technical Data:

Fire Ladder

Original ladder set, as well as, versatile roundhouse is placed on the Mercedes-Benz Atego 918 undercarriage. Ladder set construction has been completely dismantled and fully reconstructed.

Single parts such as ropes, hydraulic hose and mains, rollers, rubber items, etc. are exchanged for the new ones. Original superstructure platform is made from aluminum tear plate with antiskid coating covered with eloxal coating. Off the vehicle cabin there is a multifunction case accessible by means of lock blinds from the three sides. The case is used for storing fire facilities such as breathing apparatuses DRAGER, including carriers that are placed on extendable hold. Then for electric head office EM 30 KI F. The case has on both sides access ladder for easy output/descent to the case.
